International Filing Date: June 18, 2003
Preliminary Amendment re Sequence Disclosures

Amendments to the Specification:

Please replace the paragraph beginning at page 1, line 24, with the following rewritten paragraph:

All protein tyrosine phosphatases(PTPs) have a conserved catalytic domain characterized by a signature sequence (I/V) HCXXGXX(S/T) (SEQ ID NO: 1). Biochemical and kinetic studies have demonstrated that the cysteine residue found in this signature sequence is essential for catalytic activity of PTPs since this mutation of this cysteine completely abolishes PTP activity. See, Flint, A. J., etal., Proc Natl Acad Sci U. S. A. 94 (1997), pp. 1680-1685.

Please replace the paragraph beginning at page 29, line 14, with the following rewritten paragraph:

The peptide sequence: TSTEPQY(P0₄) QPGENL (SEQ ID NO: 2) was prepared by conventional methods. Of this, 154 mg was dissolved in 100 mLdH20 and the solution vortexed until the peptide dissolved completely. The ppC SRC 60 was then stored in 1 mL aliquotsat-20 C. This is the "Substrate" used for preparing the substrate working stock solution.

Please delete, immediately after claim 95 on page 67, the entire section of the application entitled "Sequence Listing" and insert the enclosed Sequence Listing in place thereof.
